MDGuidelines®
Medical Cost and Treatment Utilization Tool

OVERVIEW

MDGuidelines includes a comprehensive web-based tool that provides detailed information about the cost and utilization of medical treatments commonly associated with ill and injured workers. MDGuidelines' Medical Cost and Treatment Utilization Tool provides powerful insights for case managers, utilization reviewers, actuaries, and physicians.

Features:

- ✔ Predicts medical costs for a disability case
- ✔ Provides benchmarking of medical costs
- ✔ Reveals statistics about medical treatment and diagnoses
- ✔ Generates service-specific cost estimates

ACTIONABLE DATA ANALYTICS

The tool generates advanced statistics that include the percentage of claimants prescribed a selected drug and the average time it takes for patients to begin filling their prescriptions. Interactive graphs allow users to estimate the medical costs associated with returning to work during a specific week of the person's disability.

The MDGuidelines Medical Cost and Treatment Utilization Tool is based on a database of 18 million disability claims and billions of medical transactions. The solution provides medical cost and treatment utilization statistics for 15,000 unique medical diagnoses from more than 200 medical topics.

The tool produces highly accurate statistics and cost estimates through a detailed analysis of claims data. Some of the key data elements we examine include:

- Reason for Disability
- Principal Procedure
- Age
- Inpatient Stay
- Reason for Inpatient Stay
- Comorbidities
- Zip Code
- Program Type
