

MDGuidelines®

The Measure of Health

MDGuidelines is a clinical decision support solution that features the world's most trusted illness and injury duration tables and gold standard practice guidelines from the American College of Occupational and Environmental Medicine (ACOEM).

OUR SOLUTION

In addition to evidence-based guidelines, MDGuidelines includes a drug formulary, a treatment recommendation tool, a medical cost calculator, and a predictive model to help case managers estimate disability duration with a high degree of accuracy. Together, this collection of content, tools, and data helps case managers and clinicians manage employee health outcomes.

BETTER CARE. BETTER OUTCOMES.

When used at the point of care, MDGuidelines' data and evidence-based medical content helps foster physician-patient dialog, resulting in employees returning to health within expected timeframes. Using detailed analytics that draw on a database of more than 20 million disability cases, MDGuidelines helps organizations measure their performance against industry benchmarks.

MDGuidelines provides a powerful return on investment for providers, payers, and employers. MDGuidelines content can be easily integrated into existing workflow systems where it can be used to help organizations improve both health and financial outcomes.

Incorporate ACOEM clinical guidelines into your workflows.

Manage your employees' return-to-work using illness and injury duration estimates.

Benchmark your population's recovery performance against the industry's largest claims database.
